6-Station Screen Printing Machines

V1-66
American Screen Printing Machine
Specifications: Maximum Screen Width: 24" (60.9 cm)

6 Color / 6 Station American Screen Printing Machines.

To satisfy the demands of the commercial-grade screen printer, Vastex created the 6-station screen printing machines and manual garment printers. The V-1000 employs the most distinctive floating head design in the industry. Without the significant expense associated with equipment of this scale, accurate registration is possible.

One-station, one-color, to six-station, six-color 6-Station Screen Printing Machines are available in tabletop and floor-standing configurations in increments of one station and/or one color. They are completely extensible, enabling expanding shops to begin small and add stations and print heads to increase production or create specific effects.

The most compact commercial-quality press with full registration capabilities

- Robust enough to withstand the most difficult testing
- Full capability for micro registration
- Very small
- Produces exact outcomes with no waste!
- Absolute accuracy: all heads buried in prints!
- Perfect for expanding enterprises
- Scalable to change as your needs do
- Steel pallets with a long-lasting rubber top are a possibility.
- All-heads-down repeatable printing using a floating head with a three-point bearing lock
- Micro registration correction
- 6-way head leveling
- Accepts displays as wide as 63.5 cm (4/4) or 53 cm (6/6)
- Bearings for registration locks
- Accurate registration of several colors
- Three-year guarantee
- 2 hours or so, depending on the requirements, for assembly.
