Bamboo Powerbank 5000 mAh Type C Input and Output

Bamboo Powerbank 5000 mAh Type C Input and Output

A bamboo power bank 5000 mAh is a portable charger for electronic devices such as smartphones, tablets, or laptops. The term "bamboo" in this context refers to the material used for the casing or design of the power bank, rather than any functional component. Bamboo is chosen for its eco-friendly properties as it's a renewable resource and biodegradable. Manufacturers may use bamboo for the outer casing or incorporate it into the design to create a unique aesthetic appeal. These power banks typically have the same functionality as regular ones, offering USB ports for charging devices and a rechargeable battery inside. Choosing a bamboo power bank can be a good option for those concerned about sustainability and environmental impact, as they offer a greener alternative to traditional plastic or metal power banks.

- This bamboo power bank has a 5000 mAh capacity.
- Input and Output (type C): DC 5V/2A,
